

Cedar Mill Creek Flood Remediation Collaborative Project Team Meeting

AGENDA

Tuesday, October 10, 2017, 2:00pm to 5:00pm
Beaverton Activities Center, 12500 SW Allen Blvd, Beaverton

Introduction: Cedar Mill Creek and its major tributary North Johnson Creek drain a forested watershed on the west side of the West Hills mostly in Washington County. Because much of the watershed has been converted to urban uses, storm water runoff has been adversely affected and flooding occurs throughout the creek corridors even during relatively small rainfall events. The purpose of this collaborative effort is to enhance the natural functions of Cedar Mill Creek and Little Johnson Creek corridors and manage flood risks in a manner that provides high quality natural habitat, while reducing flood hazard impacts on flood-prone residential and commercial properties.

Meeting Objectives: Review and develop a more detailed understanding of the project structure, roles, and process. Review, discuss, and approve the project work plan including a community information and engagement process. Continue Project Team orientation on challenges and issues related to resolving flooding issues in the North Johnson/Cedar Mill Creek watershed. Identify other background information needed to develop a Shared Understanding of the flooding and ecosystem issues to be addressed.
