

Cedar Mill Creek Flood Remediation Collaborative Project Team Meeting

Tuesday, April 3, 2018, 2:00pm to 5:00pm

St Andrew Lutheran Church, 12405 SW Butner Road

AGENDA

Introduction: Cedar Mill Creek and its major tributary North Johnson Creek drain a forested watershed on the west side of the West Hills mostly in Washington County. Because much of the watershed has been converted to urban uses, storm water runoff has been adversely affected and flooding occurs throughout the creek corridors even during relatively small rainfall events. The purpose of this collaborative effort is to enhance the natural functions of Cedar Mill Creek and North Johnson Creek corridors and manage flood risks in a manner that provides high quality natural habitat, while reducing flood hazard impacts on flood-prone residential and commercial properties.

Meeting Objectives: Review and consider Technical Advisory Committee (TAC) recommendations for potential flood mitigation infrastructure projects and non-structural programs. Consider and approve Community Engagement Team public involvement strategy.
